Jesr POS

Point of Sale (POS) mobile application

Android • Uzbek / Russian / English

1. About the app

Jesr POS is a cashier application designed for shops and small retail businesses. It lets you manage products, build a cart, complete payments, store and print receipts, and add products by scanning barcodes. The app works without an internet connection — data is stored on the device and synchronized with the server once the connection is restored.

2. Sign in and registration

Sign in

- On the "Authorization" screen, enter your phone number and password.
- Tap the "Sign In" button.

Registration

- Tap the "Sign Up" link on the sign-in screen.
- Enter your phone number and continue.
- Enter your name and password, confirm the password, then tap "Confirm".

The password must be at least 6 characters long.

3. Home (Sales / POS)

- The top of the screen shows your name, phone, and the **Online / Offline** status. Tapping your user info opens the Profile screen.
- **Tap a product card once** to add it to the cart. **Tap it again** to remove it from the cart.
- The green/yellow dot indicates stock level (yellow = low stock).
- When the cart has items, a "Go to cart" button appears at the bottom.

4. Cart and checkout

- Each item has a **checkbox**: checked items are sold; unchecked items move to the "Returns by Purchase" section.
- Change item quantity with the + / – buttons.
- **"Postpone"** saves the cart for later (Receipts > "Postponed").
- **"Payment"** opens the checkout dialog: enter the received amount, customer name and a note (optional), then tap "Pay".

If the received amount is less than the total, the "Pay" button stays disabled.

5. Receipts

- Switch between the "Receipts" and "Postponed" tabs.
- Each receipt has a status: **Sold**, **Returned**, or **Postponed**.
- While offline, receipts show the "**Processing**" status (data is not synchronized yet).
- Tap a receipt to open its full details; use "Share" to send it.
- Tapping a "Postponed" receipt loads it back into the cart.

6. Products

Browse and search

- The "Products" section lists all products.
- Use the search field at the top to find a product by name.

Add a product

- Tap the large "**Add**" button at the bottom.
- Enter the image, name, price, quantity, barcode, specifications and description.
- Tap "Add" to save.

Barcode scanner

- Tap the **scanner icon** in the search field.
- "Scanner" opens the camera; "Manual" lets you add a product by hand.
- After a code is read: if a product with that barcode exists, its page opens; otherwise the add form opens with the barcode pre-filled.

You will be asked to grant camera permission the first time.

Edit a product

- On the product page, tap the "**Edit Product**" button at the bottom.
- You can also delete the product from the edit screen.

7. Profile

- Shows the avatar, name and phone; the pencil (✎) icon edits your details.
- In "Edit profile" you can set name, email, phone, **branch** and **cashbox**, then save.

- Greyed-out items are features that will be added in the future.

8. Settings

Printer settings

- Choose the connection type and paper size.
- "Scan" searches for available printers; then "Connect / Disconnect".

Language (Appearance)

- Profile > "Appearance" > **Language**: Uzbek / Russian / English.
- Tap "Save" — the interface switches to the selected language immediately.

About

- Profile > "About app" — app name, version and a short description.

9. Online / Offline mode

The indicator at the top of the Home screen shows the internet status:

Status	Meaning
Online	Data is being synchronized to the server
Offline	Data is stored on the device and sent once the connection is restored
